Brain-Inspired Cognitive Architectures for
Artificial Intelligence

September 22, 2022, Autonomous University
of Guadalajara, Mexico (online)

► What is the “symbol grounding problem” ?

Harnad (1990, 1994) Symbol
Grounding:

symbols grounded with capacity
to interact with real world

The background is a solid blue color. On the right side, there are several white lines of varying lengths and thicknesses, some parallel and some intersecting, creating a sense of motion or a stylized graphic element.

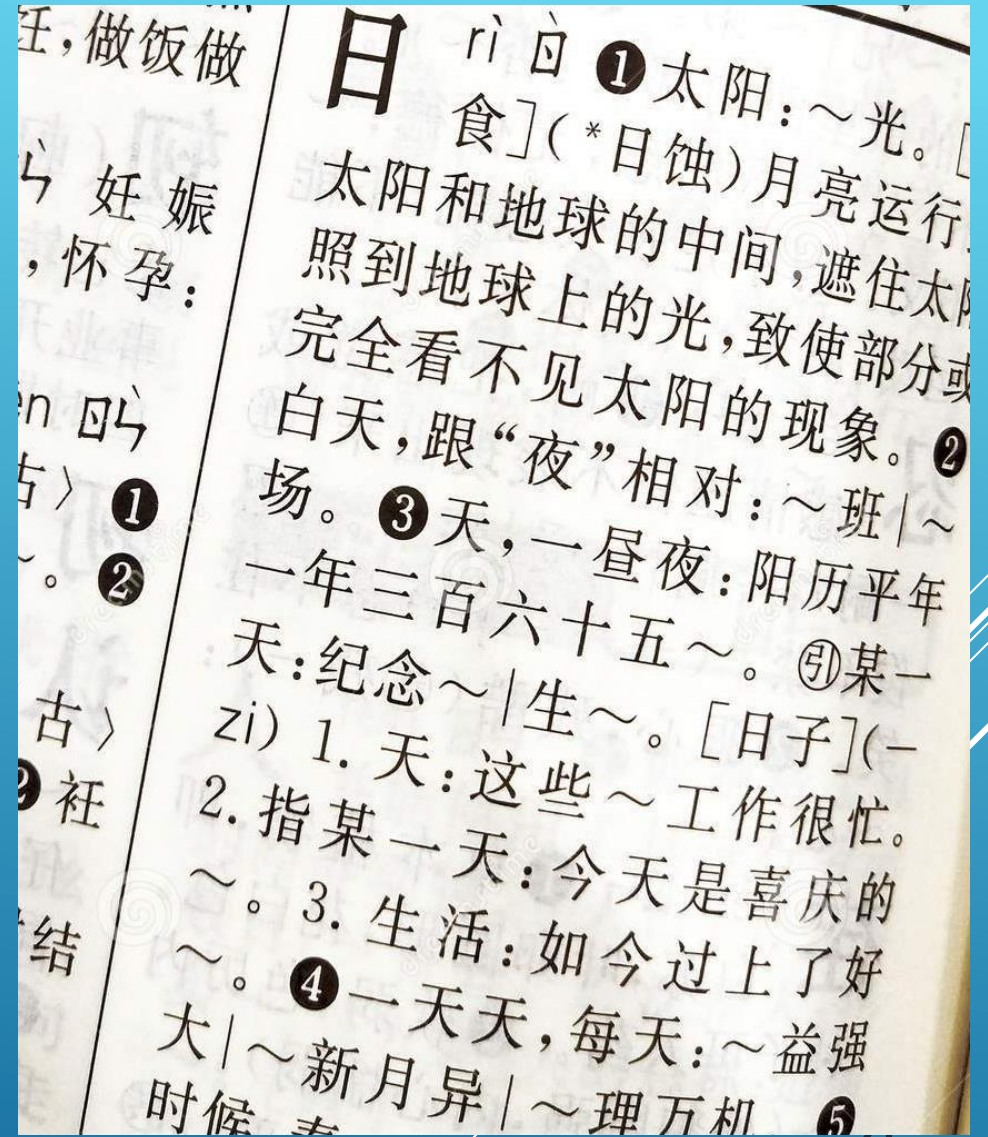

► Harnad: try learn Chinese language from Chinese-Chinese dictionary

符号接地问题

Google translate: "symbol grounding problem"

Dictionary: Sun: ~light. Eclipse (solar eclipse) The moon moves between the sun and Earth, blocking the light that hits the Earth....

Paper 14 Schneider An Analogical Inductive Solution to the Grounding Problem

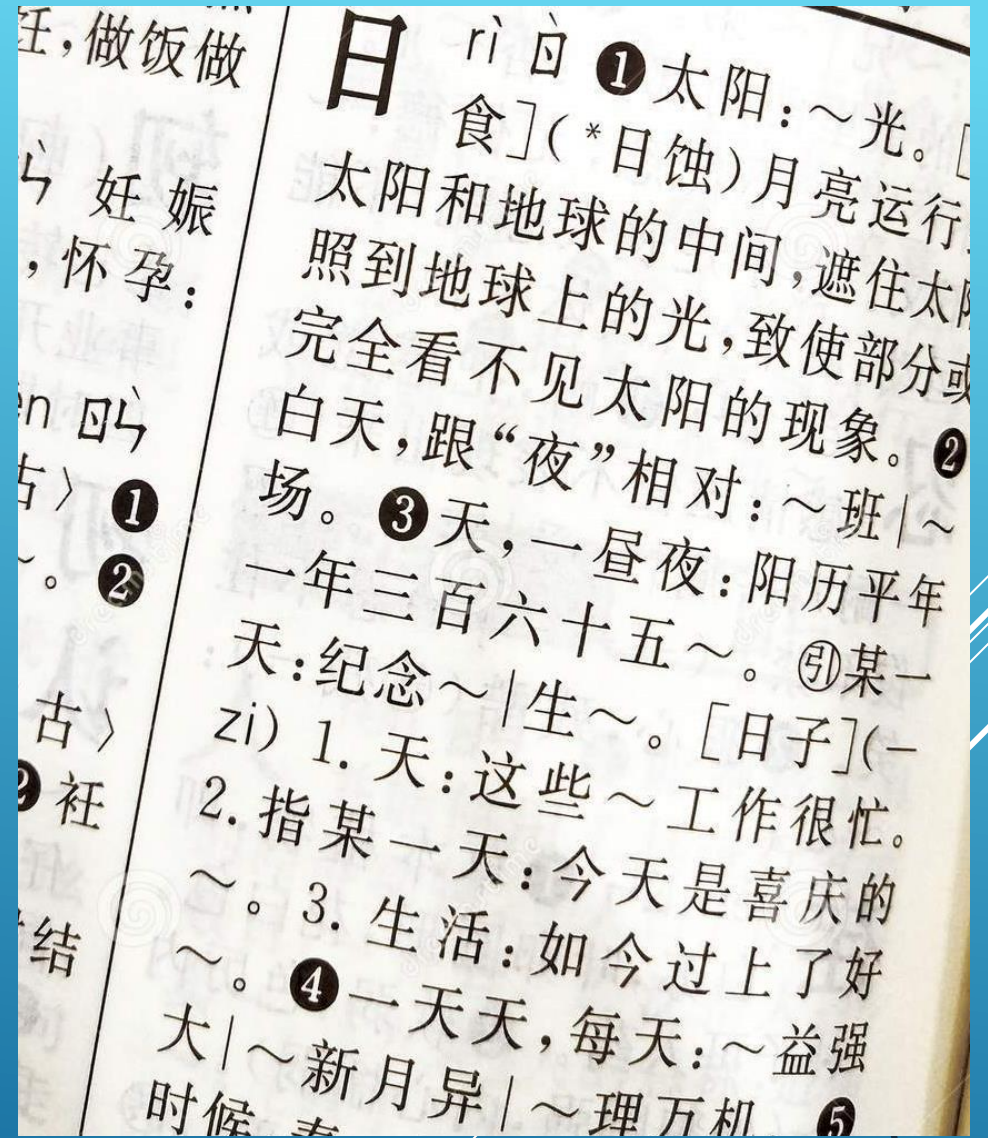

Go from one string of symbols without any meaning attached to the symbols to another string of symbols

```

Navigation Map

*Python version,
3 spatial dimensions +
3 non-spatial dimensions*

Think of navigation maps as small maps

- Not one massive associative network
- Rather, billions of small maps
- Neurosymbolic object – works with connectionist principles but can function as a quasi-symbol

(Figure 2 simplified from Chollet's Abstraction and Reasoning Corpus)

Input sensory data is now in the Working Navigation Map (WNM). What action next?

LINES					
LINES	LINES				

Best matching navigation map from Causal Memory Module now becomes the new Working Navigation Map (WNM) (and feed back the old map)

LINES					
LINES	LINES				
LINES	LINES				
LINES					

Links from that Working Navigation Map
go to this Navigation Map – this is what
occurred next in the past

LINES					
LINES	LINES	LINES	LINES	LINES	
LINES	LINES				
LINES					

Retrieve the original Working Navigation Map (which occurs automatically in the next cognitive cycle) and apply the difference to it. Results in new Working Navigation Map.

Is solid1008 a solid for pathfinding
instinctive primitive?

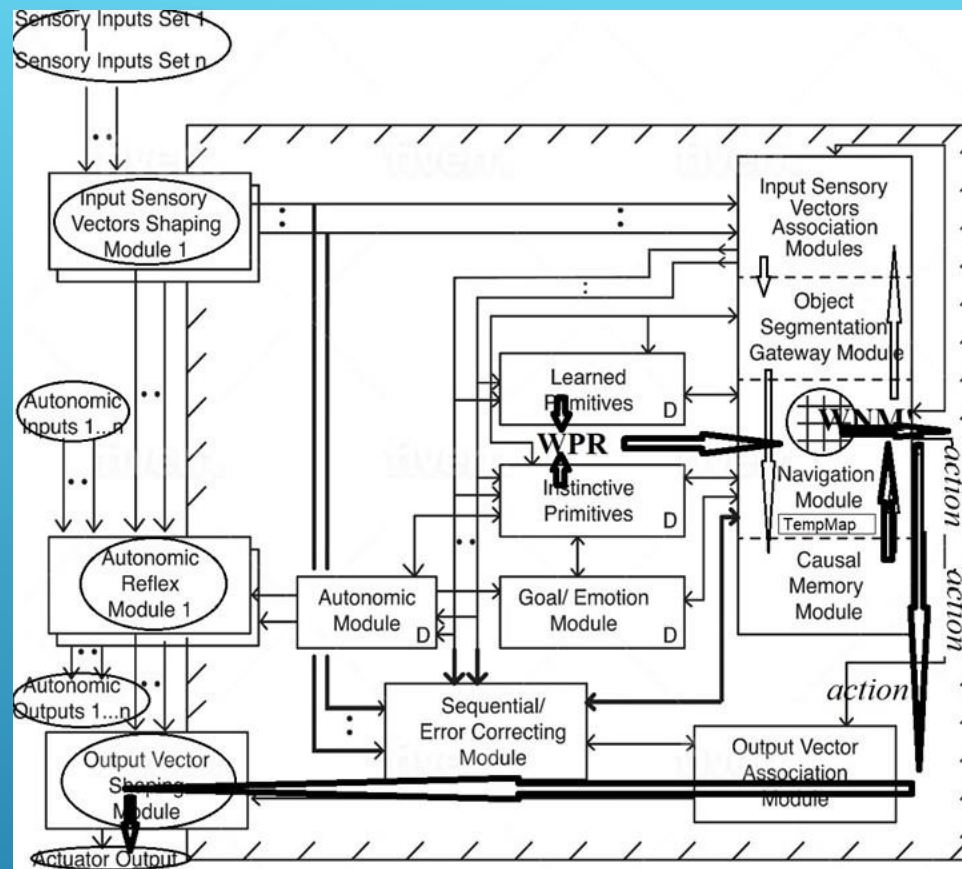

Link {1008} -- can recognize object in
scene as solid{1008} and knows it is thin
sheets

No other grounding

- Matches to NavMap about thin sheets it stepped on deep puddle and got legs wet
- Equation (98) WNM_difference is legs wet
- Equation (99) WNM_analogical becomes solid{1008} and legs wet
- This becomes next WNM' processed by the Navigation Module
- Instinctive primitive running considers solid{1008} as water, not solid, for transformation of NavMap

air	air	air	air
solid	water	water	water
solid	water	water	water
solid	water	water	water
solid	water	water	water
water	water	water	water

NOT SOLID FOR
PATHFINDING
PRIMITIVE 62

PATHFINDING INSTINCTIVE PRIMITIVE RESULTS IN SWITCH DIRECTION, DO NOT CROSS

- Analogical inductive abilities are a core mechanism now of the architecture.
- Not a special algorithm it calls.
- A core, ubiquitous mechanism of the architecture.

Not a module for IQ tests

Symbol grounding via Inductive Analogical Feedback Mechanism

grounded_feature = $\forall_{\text{feature}} : (\text{feature} \in \text{all_LNMs}_x \text{ AND } \text{feature} \in s(t))$

OR

$\forall_{\text{feature}} : (\text{feature} \in \mathbf{WNM}'_t \text{ AND } (\text{action}_{t-1} \neq \text{"move*"} \text{ or } \mathbf{WPR}_{t-1} = [\text{"analogical*"}])) \quad (104)$

$\forall_{x,t} : \text{all_navmaps}_{x,t} = \text{grounded_feature} \text{ OR } \text{link}(\text{all_navmaps}_{x,t}) \neq [] \text{ OR } \text{all_navmaps}_{x,t} = [] \quad (105)$

LANGUAGE & GROUNDING IN THE CCA5 ARCHITECTURE

action_t=

```
Nav_Mod.apply_primitive_nav_to_protolang  
(WPRt, WNM't) (106)
```

-simple nouns and verbs to describe a history of Working Navigation Maps which occurred

-same mathematics applies – grounding occurs

AN ANALOGICAL INDUCTIVE SOLUTION TO THE GROUNDING PROBLEM

- ▶ Symbol grounding is an engineering issue.
- ▶ Symbol grounding results in better problem-solving performance.

Thank you

hschneidermd@alum.mit.edu
